There is no doubt that human exposure to a variety of toxins is increasing… Cheryl’s mission is to enlighten others to the growing toxic threat of mold, often hidden beneath the surface in our homes, offices, schools and even health care centers. Describing mold characteristics, she will explain where and why it flourishes in buildings.

Cheryl brings practical advice and solutions to find, remove and avoid mold and moisture damage along with science based resources for further study. By addressing the root cause of mold, which is moisture accumulation, we can all minimize health risks.

This architect and mother began this journey when her own family became ill. Cheryl's presentation will be valuable for anyone concerned with chronic health challenges.
